

Lower 6 art – sacred geometry in architecture

Lower 6 student Pippa has been investigating sacred geometry in architecture for her personal project in art. Sacred geometry is the art of incorporating nature into man-made structures. These patterns are believed to have metaphysical and symbolic meanings that reflect the harmony of nature and are believed to create pleasing and soul satisfying spaces in architecture.

Pippa has been on an explorative journey, looking into the interiors and exteriors of buildings and the patterns within them. This has led her to looking at gothic architecture and ornate windows from religious buildings, combining laser cut stencils with paintings and patterns she has designed.
