

Prep School Science Week 2025!

This week has been incredibly egg-citing as Prep have not only experienced the fantastic Explosive Foods workshop, but they have also taken on The Great Gateways Egg Drop Challenge in honour of Science Week!

Each class was given the task of designing and constructing a device that would protect an egg from a drop from a height. They were given a variety of recycled materials to create their devices from.

There were 2 main rules; 1. The device needed to be made within one lesson and 2. The egg must be able to be removed easily from the device to check for cracks!

The children worked amazingly well in team in order to construct their devices and they had some wonderful and creative ideas for how to best protect their egg.

Over the course of the week, egg protection contraptions were tested in science lessons, with the best ones going on the grand finale in Friday's assembly! We were all on the edge of our seats as the eggs were dropped from the highest height of the PAC balcony!

Well done to the winning teams for their incredible protective device!
