

Lower 5 geographers race to save the world!

Lower 5 were given the opportunity to participate in a special bonus geography lesson on Friday in order to provide them with a chance to experience what Sixth Form geography is like.

Having found out that they had just been offered a job at the Icelandic Meteorological Office, their mission was to solve ten activities based on the 2010 Eyjafjallajökull eruption with each task getting them closer to being able to issue a text alert to the Icelandic population and stop flights from departing across Europe.

Throughout their mission, they had to use information containing facts about types of lava, types of volcanoes and the effects of volcanic eruptions.

In addition, there was a race between teams to see who could issue the alert first!

Lower 5 were absolutely wonderful throughout this, showing terrific teamwork skills as well as the ability to use data and interpret geographical information quickly. Not only that, but there was also a lot of excitement in the room as each challenge was accomplished and the next one was received.

A huge congratulations to Lower 5. I hope to see you in A Level geography in a little over a year's time!

Mrs Elizabeth Hayward
