

## Upper 3 block bots

As part of the DICE carousel some of our Upper 3's have completed their design technology induction project which involved designing and manufacturing a wooden block bot based on a theme of their choice.

Upper 3 have worked with a range of materials and have covered basic but necessary practical skills required to help them progress through the subject safely and confidently during their time at Gateways. This is such a fun project that allows them to let their imaginations run wild and encourages them to build their confidence when using a range of hand tools, machinery and CAD/CAM to mark out, cut and sand timber resulting some extremely impressive designs. Well done Upper 3!
