

Lower 4 investigate the dangers of selfies

Lower 4 have started their Computer Science lessons this year by looking at Internet Safety. Staying safe on-line is a topic on which we must all be vigilant. We have looked at the dangers of sharing images, cyber bullying, the tell-tale signs of grooming, fake news and the possible dangers of taking selfies.

One task involved finding examples of dangerous selfies, and it is fair to say there are some quite shocking examples from pilots taking images out of jumbo jet windows to trespassing on the very top of skyscrapers. The class did enjoy the confusion of one student who thought they had been set the task of taking their own dangerous selfie!
