

Lower 4 Geography fieldwork on the Holderness Coast

One of the best things about Geography is that it gives pupils a chance to study people and places in the “real world”. As such, I was delighted to take Lower 4 pupils out on fieldwork on Thursday 23 September. Things really started to feel like they were getting back to normal as Lower 4 boarded the coach to take them to the Holderness Coast on the East of England.

Following strict health and safety procedures we were all set to go. Our first stop was Mablethorpe where pupils had the opportunity to see the impact of the rock groyne in acting as coastal protection for the village, whilst also considering the impact of this coastal defence on areas to the south of it.

Next, we travelled north, by-passing Bridlington and headed to the chalk cliffs of Flamborough Head. Here pupils identified coastal landforms such as a wave cut platform and other features such as an arch, stack, and stump. The day flew by, and before we knew it, it was time to board the coach back to school.

High School & Sixth Form

I would like to thank Miss Rayner and Mr Davidson for supporting pupils on this trip. Additionally, a huge “well done” and “thank you” to the pupils. They were a pleasure to spend time with and their enthusiasm and interest was infectious; their faces in the photograph above say it all.
