

Connections and patterns in Upper 4 Maths

This week Upper 4 have been using scattergraphs to see if there is a connection between two sets of data. They collected data from the class – their height and their handspan. Do you think there is a connection between the two?

Once the data is displayed in a scattergraph it is easier to see whether there is a connection or not. If you want to find out if there is a link between handspan and height, you'll have to find someone in Upper 4 and ask them!
