

Upper 4 Art – steampunk insects

Upper 4 pupils have been looking at the artist Vladimir Gvozdev who creates futuristic, steampunk art. His work consists of turning animals and insects into functional machines. Pupils have learnt how to grid up an image to make their drawing accurate in terms of scale and proportion. They have then developed their outline by adding functional machinery within it; adding cogs, pipes, nuts, bolts, chains and more inventive ideas independently. For homework pupils have also created a research page, presenting their information creatively.
