

Algebraic substitution in Upper 3

Upper 3 have been learning the language of algebra this week. In one of the lessons members from the class represented letters, numbers and mathematical operations. In the photo above, you see that Otto is representing the variable x and Bo is representing the number 3. When they substituted a number for the variable they were then able to give a value for the expression.

In the photo below, you can see that Otto is representing the variable x and Lucas is representing the number 1. When they substituted the number for the variable they were then able to give a value for the expression.
