

Upper 3 geographers complete escape room challenge

This week, Upper 3 began their new topic about tropical rainforests. As an introduction to where this global biome is located, they worked together in small teams in order to complete a series of challenges.

Their tasks took them on a journey around the world, naming the different rainforests that exist as well as using map sources to name the countries and continents within which they are located.

Puzzles were solved and the codes they deciphered provided access to the next challenge. After a series of five challenges, most groups successfully made their escape showing their superb geographical understanding!
