

Lower 4 geographers practice active revision techniques

This term pupils in Lower 4 have been studying population. They have learned about the factors that affect global population distribution, as well as developing their geographical skills by constructing choropleth maps, population pyramids and learning lots of geographical terminology.

They had their end of unit assessment this week, half of which was online, the other half involved extended writing tasks on paper. In order to prepare for this assessment, the pupils completed numerous online games as well as active revision games in class. The mini whiteboard photographs have two questions as part of "2 lies and 1 truth", can you spot the correct answers?

Lower 4 contains a lot of excellent geographers, with boundless enthusiasm for the subject. I look forward to marking their assessments and congratulating them on their academic progress.
