

Upper 4 escape from the impacts of Covid-19!

Upper 4 have been learning about the geography of health this term and with a recent pandemic still fresh in their minds, we have been exploring the geographical impacts of Covid-19 upon societies, economies and the environment.

To aid their classification of different impacts, this week, we played an escape room style lesson consisting of seven challenges, each of which was designed to develop their knowledge and understanding of local, national and global impacts.

The tasks each required teamwork so it was pleasing to see how collaborative learning aided pupils in making their escape. Congratulations to all of Upper 4 but particularly those teams who successfully completed their mission to find the important vaccine required to save the world!
