

Lower 1 investigate living things

This week in science, Lower 1 started their new topic of 'Living things and their habitats' by investigating how we can tell if something is living, dead or never been alive. The children used their knowledge of the seven life processes to decide if something was living or not living. They then delved further into their research to separate the non-living things into 'dead' and 'never alive'. There was much discussion around some of the items but the children used their fantastic scientific reasoning skills to argue their decisions and persuade others of their choices.

All children demonstrated clear understanding of the life processes and made reasoned decisions in their work. Well done, Lower 1!
