

Science club

The start of the week saw some very enthusiastic and eager Transition scientists arrive for the first science club of the term. The children were very excited to share experiments they have done at home and even share ideas of experiments they would like to try.

This week's experiment was a walking water rainbow. The children were careful to add water and food colouring into some clear cups, they added they kitchen roll and watched as the colours made their way up the paper towel. The final result ended with a beautiful rainbow pattern. The children were all very keen to go home and try it with their families.

We are looking forward to trying out lots of experiments over the coming weeks.
