

Adventures in geography: Upper 3 and Lower 4 embark on virtual reality voyages

Our pupils, equipped with brand-new Virtual Reality (VR) headsets, have soared through the skies of knowledge, exploring remarkable destinations without ever leaving the confines of the classroom.

Upper 3 pupils embarked on a whirlwind tour of the Wonders of the World, soaring past the majestic statue of Christ the Redeemer in Brazil and gliding above the awe-inspiring Victoria Falls, which divides Zimbabwe and Zambia.

Meanwhile, Lower 4 pupils went on their own exhilarating expedition, delving into the intricate world of population density. They navigated the bustling streets of Singapore, a densely populated island, before venturing to the remote Easter Islands, where the Moai statues stand as silent guardians of a sparse population. The adventure did not stop there... the pupils were then transported to Iceland, where they witnessed a shield volcano erupting in all its fiery glory. The journey ended with a visit to Indonesia, where they explored the Bromo Volcano, a towering composite volcano.

These immersive experiences not only brought geography to life but also ignited a spark of curiosity within our pupils. Through this extraordinary journey, they have deepened their understanding of diverse landscapes, population dynamics, and the sheer grandeur of our planet's natural and new wonders.
