

## Harnessing the power of online resources

There is no greater joy for any teacher, especially in mathematics, when every week at the start of a lesson a pupil shows off their independent work (distinct from the usual homework). When pupils show such initiative to utilise online resources, like the Sparx Maths website and some other recommended platforms such as Corbett Maths, it reflects their resourcefulness and dedication.

Upper 4 pupil Ishbel (pictured above), is driven to excel in mathematics and her approach encapsulates the inspiring qualities of resilience and determination shared by many of our pupils at Gateways.

The online learning platform, Sparx Maths, offers personalised tasks tailored to individual learning needs. The interactive nature of the program provides immediate feedback which allows pupils to work at their own pace, fostering a deeper comprehension of challenging mathematics topics which grows their confidence and fuels their desire to tackle more complex problems.

Similarly, the Corbett Maths website provides comprehensive video tutorials and practice materials that strengthen pupils' understanding of core principles in mathematics.

# High School & Sixth Form

There are other similar valuable websites out there to support pupils' learning of mathematics (contact me if you would like some further recommendations) and I would encourage all pupils to be more active in taking responsibility for their learning and start using these freely available online resources to continue building their knowledge base in mathematics.

Mr Charles Adegboro
