

Lower 5 pupils are challenged to complete the Crystal Maze

On Wednesday pupils in Lower 5 worked in teams to compete in the Crystal Maze challenge. The Crystal Maze is split into four zones based on four ancient cultures that made important mathematical discoveries. Each zone has three puzzles; a physical puzzle that requires you to make something, a skill puzzle involving numbers and a mystery puzzle. In one of the challenges pupils built a twenty sided platonic solid known as a icosahedron!
