

## Superstars at solving equations

Pupils in Upper 3, group 2 and Lower 4, group 3 have worked very hard to master solving equations over the last two weeks. To begin with pupils learnt about the difference between a term, expression and an equation. We then worked on solving equations, firstly on equations that require one step and then solving equations that require more than one step. More complex equations involving brackets and fractions were tried as well.

I am really impressed with the focus shown by all pupils as we lead up to the end of the summer term. All pupils have shown detailed working out and have formed good habits with communicating their methods ready for the next school year. Well done!
