

Lower 1 scientists

In science, we have been looking at everyday materials and their properties. We started by searching our classrooms for all of the different materials we could find then we took our search to the outside. We enjoyed looking for all the different materials and their uses. After we found all the different materials, we discussed the properties of materials and what made them so good at their job.

The children have also enjoyed exploring some of Doctor Whizzbang's crazy inventions and why they may not work, like a chocolate teapot or a glass football. Well done for all your hard work, Lower 1!

Miss Beth Adamson and Miss Charlotte James
