

Upper 2 - fantastic science experiments

As part of our science topic on forces, Upper 2 have been planning and conducting some experiments. We looked at the surface area of parachutes affecting how long they take to fall to the ground and which shape is the most streamlined in water. We have learned lots on friction, air resistance, and water resistance, so if you get a chance, ask us a question on it – we are now experts!

Mr Mike Arnold and Mr Matt Chandler
