

Lower 2 inflate their science knowledge

In Lower 2 we have been learning more about states of matter in science. This week, we were investigating gases. We discussed how fizzy drinks are made, which gas they contain and why carbon dioxide is important. Our big question for the lesson was: 'Do gases weigh anything?' The children discussed their answers and concluded that in fact, gases do weigh something!

To conclude our learning, we conducted an experiment to investigate how much gas is released when we open a fizzy drink. The children were amazed when the balloon inflated with carbon dioxide!
