

Saving the environment!

This half term our Lower 1 scientists have been finding out about the impact humans are beginning to have on our world. We have continued our work by thinking about plastic pollution and how to save water.

In Miss Adamson's class, the children have shown superb understanding of how important water is and how we take it for granted. We carried out a water investigation to find out how much water we could save in an action as simple as washing our hands. The children observed that if we turn off the tap whilst applying soap, we could save almost a litre and a half of water! They have been thinking about the uses of water and made pledges to try and save as much water as they can for all life on Earth.

Miss James' class have been out on the front line, cleaning up our school grounds. They learned all about the impact plastic is having on our environment and what they could do to help save it. They took to the fields, litter pickers and rubbish bags in hand, and did a full collection of packets and other rubbish scattered around the grounds. If only all people could be like Miss James' heroes...!

We'd love to hear about how you can save energy, water and plastic in your homes. Keep saving the world, Lower 1!

Miss Beth Adamson and Miss Charlotte James
