

Upper 2's scientific exploration into the Solar System

In their scientific endeavours this week, Upper 2 immersed themselves in the captivating study of our Solar System. Armed with a helpful mnemonic, the children can now recall the names and order of the planets – a skill we encourage them to share at home.

Their exploration extended to finding out the characteristics of the Terrestrial and Jovian planets. Transitioning seamlessly to a hands-on approach, they created scaled models, employing mathematical calculations and ratios to represent planetary sizes and distances from the sun accurately.

Undeterred by the cosmic expanse, the class delved into the orbits of the planets. As we celebrate this astronomical journey, Upper 2 emerges with a deepened fascination for the wonders of our Solar System.

Mr Mike Arnold and Mr Matt Chandler
