

## Lower 2 maths - dividing by 10

In a recent maths lesson, children from Lower 2 explored numbers with hands-on activities. Using concrete resources and a place value chart, they connected dividing by 10 to digit positions. They discovered that when dividing by 10, digits shift one place to the right. This visual understanding is crucial for their numerical journey. Furthermore, they grasped the inverse relationship between multiplying and dividing by 10.

We're excited about their progress and encourage you to explore these concepts at home to help deepen their understanding.

Mr Mike Arnold and Mr Matt Chandler
