

## Lower 3 learn about light

Lower 3 pupils have started the new calendar year by learning about light, looking at how light interacts with objects and have learnt that light travels in straight lines.

The pictures above show a method that the Lower 3 pupils used to prove that light travels in straight lines. They aligned three pieces of card with a hole in each one and when aligned perfectly, the light should be seen on the table.

Next, they will be looking at how moving an object can manipulate the object's shadow.
