

Mathematics meets literacy – comprehension task

Upper 4 pupils recently engaged in a captivating interdisciplinary activity where mathematics met literacy. Exploring a starter activity, pupils were presented with a comprehension passage about the architectural marvels of ancient structures, focusing on the Colosseum in Rome. The passage contained historical details, mathematical facts, and data related to the construction and engineering of this iconic amphitheatre.

After reading the passage, pupils tackled a variety of questions designed to promote effective communication, data analysis, problem-solving, and the ability to understand complex historical and architectural information – skills that are crucial for their academic progress.

Witnessing our Gateways pupils in action is always rewarding. Their level of focus and engagement, regardless of the activity, reflects the standards we expect from our future leaders.
