

Active mathematics

This half term, Transition are learning all about teen numbers! This week, we have been exploring all the different ways that we can make teen numbers – using different manipulatives to help us to represent the numbers in concrete ways. We then went outside to make a human number line!

In Transition, we aim to give children a deep understanding of number and we try to practice our maths in fun and active ways! It means that we explore lots of different methods of representing numbers in concrete, pictorial and abstract ways. The children really learn to understand each number before we move on to using the numbers to add, subtract, multiply and divide.

The children have really impressed us with their growing understanding of teen numbers – well done Transition!
