

Chilling discoveries: Upper 3 geographers embark on an Antarctic adventure with its extraordinary wildlife!

This term, our Upper 3 geographers have delved into the fascinating realm of Antarctica, exploring its location, territorial claims, climate, and the remarkable adaptations of animals to survive in the coldest place on Earth.

In pairs, pupils engaged in detailed research covering physiological, anatomical, and behavioural adaptations. This week, they brought their findings to life through interesting presentations, incorporating visuals and interactive quizzes to engage their classmates. This collaborative effort not only showcased their knowledge but also honed essential skills such as ICT proficiency, research abilities, presentation techniques, refining capabilities, working collaboratively as well as public speaking.

The high standard of their work was truly impressive, and I'm confident you would have enjoyed witnessing their achievements.
