

Amazing arrays

In our maths lessons Lower 1 have started learning about multiplication and division. The children have learnt a range of methods to support their multiplication calculations, including using arrays. They enjoyed using counters and cubes to make arrays that represent a multiplication. All the children have worked fantastically hard with their learning and have produced some brilliant work demonstrating good knowledge of multiplying numbers. We have begun looking at grouping and sharing to calculate division sums and are so impressed with the children's efforts so far.

What a great start to our new topic, well done Lower 1!
