

Bubble fun in Upper 1

Science week this year is all about making science fun and interactive. And what can be more fun than bubbles?!

The children were tasked with making bubbles that were not spherical in shape. They used construction toys to make some 3D structures, then dipped it in a strong bubble mixture to see if the bubble would take on the shape of the structure. The cuboid worked amazingly!

Once Upper 1 made the shapes, they had fun using them as bubble blowers, seeing who could blow the biggest one!

We also saw how science does not always go to plan – we tried to balance the bubbles on some gloves but we had definitely used the wrong ones! Maybe the children could experiment at home and find the right ones to use?
