

Keeping clean

In our PSHE lesson this week we have talked about how to keep clean and reduce the spread germs. To help with our learning we conducted a germ experiment. After sneezing some glitter germs, the children all came to shake my hand to see if the germs would spread on to their hands. We then tried to get rid of the germs using a range of methods; a tissue, cold water and soap and water. The children were shocked to see that water alone didn't get rid of the germs. We spoke about how to wash our hands properly to ensure we get rid of germs. It has been pleasing to observe the children taking the advice onboard when washing their hands.
