

## Spotlight on Science Club

Transition pupils enjoyed an egg-cellent (that's the only one) session learning about chemical reactions by making fizzy eggs with Mrs Hallam and Miss Hayter in Science Club.

Having listened intently to their instructions, the children first mixed food colouring to create their palette and then unleashed their inner artists, decorating their eggs with bold and unusual patterns.

Then came that great friend of the amateur chemist: baking soda. Hot on its heels came its immortal nemesis - vinegar and the rest was colourful, frothing magic!

As well as enjoying practical science and hands-on learning, the children came away with their very own kaleidoscopic egg, fit for any mantelpiece and sure to be treasured forever...or at least until it starts to smell.
