

Design Technology – moving toys

Upper 2's design technology project is coming to an end. The pupils have been working tirelessly on their moving toys. We started the project by looking at how to create a moving toy using cams, axles, followers and handles.

The pupils have worked very hard on these toys and have had to use lots of resilience and perseverance to overcome many obstacles. Upper 2 are now excellent at problem solving, as this task has thrown many challenges their way!

Parents will have the opportunity to come and see the projects in action on Monday 15th April as they will be on show for our Upper 2 Open Doors event.

Mr Mike Arnold and Mr Matt Chandler
