

Upper 6 get planning!

The Upper 6 business studies group are now studying their final topics before we start revising. Critical path analysis has allowed them to plan projects, calculate float times and identify tasks on the critical path. We have discussed the value of network analysis. The network diagrams proved challenging at first, but once they had identified the golden rules, all students quickly got to grips with amending diagrams and successfully calculating the critical path. We had lots of fun working through examples and enjoyed giving our brains a workout!
