

Using AI to help with school work

Upper 3 have been looking at how technology may impact their lives in the future. We have looked at pros and cons of driverless cars, automated homes, and different methods of communication we might see such as holograms.

In our final topic Upper 3 have made use of Co-pilot in Bing. The new AI-enhanced Bing runs on a variety of advanced technologies from Microsoft and OpenAI, DALL-E, a deep learning model to generate digital images from natural language descriptions.

Upper 3 experimented with creating imaginary images, writing 500 word stories and book summaries. We also tried translating into different languages and creating raps which could help in revision.

Whilst stressing that using AI tools to complete homework was not a good idea, Upper 3 have used AI to help them to produce presentations on how they can use AI to help with revision questions, explaining concepts to them and giving them starting ideas for creative tasks or homework.
