

## Lower 6 biology fieldwork

Last week, the Lower 6 biology group, Dr Newton, Mrs Yeomans and Mr Davison spent two days, in a variety of weathers, undertaking practical work for Biology A Level.

The first stop was the hamlet of Settrington, just off the A64, where they spent a couple of hours looking at beck life and water quality. The session soon turned into a fierce competition to see who could find the largest crayfish and then latterly fish. We then went to Filey Brigg to examine the exposed shore and compare the sea-life there to the sheltered one. Ironically, the exposed shore was far less windy than the sheltered one.

After a night in camping pods in Dalby Forest, we then went to Bridlington beach to work on succession analysis. A good number of new species of plant were discovered, as well as the group developing an expert knowledge of sand and soil.
