

Upper 3 geographers bring relief maps to life

Upper 3 geographers have been learning how relief (*the height and shape of the land*) is shown on maps. One of the methods used by cartographers is layer colouring, which presents data on a choropleth map, using colours to represent different heights above sea level.

The pupils had just one week to complete the project and the results were superb. The creativity and effort put into these models was truly impressive, displaying not only their understanding of the subject, but also their artistic flair. Well done to all our budding geographers for bringing their studies to life in such an innovative and engaging way!
