

## Upper 3 pupils have a go at making Oobleck!

This week, my Upper 3 pupils and I created Oobleck using cornstarch and water. The pupils were excited to mix the ingredients and observe the unique properties of this non-Newtonian fluid. A highlight was exploring how Oobleck transitions between solid and liquid states under different pressures. This sparked lively discussions about the science behind these properties and their real-world applications.

The experience was enriching, educational, (and messy), captivating and enhanced Uppers 3's understanding of different scientific principles.
