

## Lower 2 explore the plant life at school

This half term, our topic in science has been 'Animal and Plant Classification'. The children have created some brilliant classification keys, asking different questions in order to categorise the animals and plants in different ways. Battling the elements, the children explored the school grounds, trying to find as many different species of plant life as they could. They could also see the deciduous trees starting to drop their leaves, as you can see in these pictures.
