

Lower 2 investigate snowy solids

For our science topic this half term, we are studying 'the states of matter'. The children have learnt the properties of each state and can draw particle diagrams for each.

Luckily for Lower 2, Christmas came early with some snowfall this week! We went out to investigate the chilly solid, holding it in our hands, watching it change states. The children identified that when the heat from our hands started to warm the snow, it began to melt. Here we saw not one, but two, states of matter – solids and liquids!

To finish off our snowy investigation, the children put their building and teamwork skills to the test to build a snowman. Lots of fun was had by all!
