

Lower 2 go back in time with cup phones

For our science topic this half term, we are studying sound. The children have been investigating how sound is created and have established that this is due to vibrations! Using a tuning fork and a bowl of water, the children had lots of fun, seeing the water jump out of the bowl because of the varying vibrations.

After this, in pairs, the children created cup phones. They were amazed at how the sound travelled. You never know, they might want one of these instead of a mobile!
