

Looking for animals in the playground

In science this half term, Transition are learning all about animals!

The children will learn about lots of different types of animals and will begin to be able to classify them into mammals, reptiles, birds, amphibians and fish. They will learn about animal diets start to be able to tell if an animal is a herbivore, carnivore or omnivore.

We are lucky to have such a large outdoor space where lots of animals live. This week, Transition went outside armed with binoculars to see what signs of animals we could see!

We found lots of feathers, poo and animal tracks and nests. We even saw a huge group of crows finding food on the field and were lucky enough to spot two Red Kites as they swooped above us.

The camera trap had been set up over the weekend and allowed us to see some nocturnal visitors too – including a (very well-fed) rabbit and a fox!
