

## Pizza data party

Tasty Maths!

Upper 4 pupils recently combined their love for pizza with their mathematics skills in a deliciously creative activity. Working in small groups, they conducted a survey to find out their year group's favourite pizza toppings. Using the data they collected, the pupils created both pie charts and bar charts, allowing them to compare the two methods of data representation.

This hands-on activity not only helped them understand the power of visualising data but also sparked some lively discussions about which toppings reign supreme (spoiler: pepperoni was a clear favourite!).

By blending maths with a slice of creativity, the pupils discovered how fun and practical data analysis can be.
