

Lower 2 – the digestive system

This week in science we have been learning about the digestive system. We conducted an experiment to see if we could reconstruct 'digestion' using Weetabix, a plastic bag as the stomach, water to represent the saliva, orange juice as the stomach acid and some tights in exchange for the small and large intestine. It seemed that the pupils either completely loved it or needed to look away, as the Weetabix made its way through the small and large intestine! Once a hole was cut in the tights, the now rather soggy Weetabix ended up back in the bowl at the end, to the sound of some "errrs" and "how cool".
